RESEARCH INTERESTS

I am a researcher in **HCI**, **Human-Centered AI**, and **Interactive AI Alignment**, focused on improving human-AI alignment through interactions in creative domains. Concretely, I build systems that enable humans to (1) think through problems using externalized, manipulable abstractions, (2) specify visual intent precisely through direct manipulation rather than ambiguous natural language, and (3) inspect and steer AI’s interpretation through structured representations that serve as common ground between human and AI.
